## PROFESSIONAL SUMMARY

Data analyst with 1.5+ years of consulting experience in environmental data analysis and technical reporting. Experienced in using Power BI, Excel and ESdat to manage, analyze, and report complex datasets. Skilled at collaborating with cross-functional teams and translating stakeholder requirements into analytical solutions. Proficient in SQL, Python, Tableau, with a passion for delivering actionable business insights.

---

## EDUCATION

### Seattle University

M.S. in Business Analytics

Relevant Courses: Database Systems, Programming, Machine Learning, Data Visualization

Seattle, WA

Sep 2025 - Mar 2027

Current GPA - 4.0

---

## SKILLS

Languages: SQL, Python, R | Visualization: Tableau, Power BI, QGIS | Analytics Tools: MySQL, Excel, RStudio, ESdat | Version Control & Collaboration: Git, GitHub

---

## EXPERIENCE

### Arcadis

India

#### Graduate Consultant – Data Analytics

May 2021- Feb 2023

- **Collaborated** with stakeholders to consolidate site-specific spatial data and build a **QGIS dashboard covering 300+ UK sites** for a petroleum client.
- **Reduced project cost by ~40%** and accelerated environmental risk assessments by replacing manual report reviews with centralized QGIS dashboard.
- **Enhanced a Power BI dashboard** by integrating quarterly monitoring data from ESdat and updating contaminant trends to support an oil-terminal client's ongoing investigation.
- **Managed and validated 50+** environmental datasets through **cross-team coordination**, standardizing laboratory data in Excel and integrating it into ESdat to produce statistical analyses, contaminant trend analysis for compliance reporting.
- **Mentored 4 colleagues** and oversaw ESdat workflows, including data imports, troubleshooting, and quality checks to ensure data integrity.

---

## ACADEMIC PROJECTS

### COVID-19 Data Exploration & Analysis | MySQL | [GitHub](#)

- **Analyzed 170K+ COVID-19 records across 219 locations** to evaluate how infection rates, mortality, and vaccination progress varied across geographies and over time.
- **Engineered population-adjusted and rolling vaccination metrics** using joins, CTEs, window functions, and temporary tables to enable standardized comparisons across locations.

### YouTube Recommendation Performance Dashboard | Python, Power BI | [GitHub](#) | [Live Dashboard](#)

- **Built an end-to-end Python pipeline** to transform **1M synthetic** user-video interactions, engineering features for quarterly trends, video length, content category, device, and viewing time.
- Developed an interactive **Power BI dashboard with 6 KPIs and 4 slicers** to track recommendation CTR, subscription conversion, watch completion, segment variance, and quarterly trends.
- **Automated rule-based performance summaries** to identify high-performing segments, engagement risks, and opportunities for optimization.

### Tokyo Airbnb Revenue Analysis | Python, Tableau | [GitHub](#)

- Processed **27K+ Tokyo Airbnb listings** using Python for data cleaning, missing-value treatment, outlier handling, and feature engineering.
- **Identified key revenue drivers** across property, host, neighborhood, and review characteristics **using statistical analysis and Tableau visualizations** to support **revenue optimization**.
- Built and compared **three regression models**, selecting the **log-log model** based on model fit, which explained **57.4% variation in annual revenue**.

---

## AWARDS & PUBLICATION

- **Awarded Business Excellence – Technical Champion** twice for improving data accuracy across multiple projects.
- **Co-authored research** on dye adsorption using graphene oxide, analyzing multivariable experimental data and applying statistical models to support process optimization.
